#### DETAILED ACTION

The examiner acknowledges the receipt of applicants' after final amendment dated 1/05/20111.

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

#### Examiner's Amendment

 An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Engene Perez on 01/14/2011.

- In claims 1, 11, 21 and 22 the phase "along a thickness direction" should be changed to "along the thickness direction".
- Claim 11 should be written as follows:

An organic EL display apparatus comprising the organic EL element of claim 1.

#### Allowable Subject Matter

 The following is an examiner's statement of reasons for allowance: applicant claims. Application/Control Number: 10/584,413

Art Unit: 1786

An organic EL element comprising, between a positive

electrode and a negative electrode, at least a luminescent layer, a hole transport layer adjacent to a positive-electrode side of the luminescent layer, and an electron injection transport layer adjacent to a negative-electrode side of the luminescent layer, wherein wherein a hole injection layer is provided between the hole transport layer and the positive electrode, and the conductivity of the hole injection layer continuously changes along the thickness direction of the hole injection layer, wherein the hole injection layer includes an acceptor, and wherein the hole injector layer has a border region with a reduced acceptor concentration formed in the vicinity of an interface between the hole injection layer and the positive electrode: and the acceptor concentration in the hole injection layer changes by at least 10% in the vicinity of the interface.

 A search of the prior art did not show the claimed invention. The closet prior art appears to be Oh (US 2003/0118866) in view of Zhou (Advanced Functional Materials 2001, No. 4, P. 310-314) and van Duren (Advanced Functional Materials, 2002, Vol. 12, No. 10, pages 665-669).

Oh discloses and organic electroluminescent device (OLED) with an organic multilayer composed of layers in the following order (paragraphs 10-16): anode/Hole injection layer (HIL)/Hole transport layer (HTL)/Light emitting Layer (luminescent layer)/Electron transporting layer (ETL)/Electron injecting layer (EIL)/ Cathode.

Zhou discloses an OLED with an HIL where the layer thickness can be controlled by an evaporation process and the concentration of the component(s) that makes up

Application/Control Number: 10/584,413

Art Unit: 1786

the layer affect the conductivity. Zhou also teaches a HIL containing a strong acceptor, 2,3,5,6-tetrafluoro-7,7,8,8 tetracyanoquinodimethane (F4-TCNQ) (page 310) which leads to OLED(s) that exhibit lower driving and operating voltages (abstract).

van Duren discloses an anode composed of ITO adjacent to an organic layer (abstract). van Duren mention that indium from the ITO electrode can diffuse into the adjacent organic layer (page 667).

The combined references of Oh, Zhou and van Duren, teach a similar device structure and components; however, the acceptor concentration in the hole injection layer changing by at least 10% in the vicinity of the interface would not appear obvious based on natural organic component diffusion near the interface or by metallic diffusion on indium at the interface. Additionally, applicant uses a deposition method which does not allow for diffusion between the adjacent layers.

Based on the closest prior art of Oh, Zhou and van Duren there appear to be no obvious means of arrive at the claimed invention

#### Withdrawal of Election Restriction

6. Claims 1-10 directed to an allowable product. Pursuant to the procedures set forth in MPEP § 821.04(B), claims 11-20, directed to the process of making or using an allowable product, previously withdrawn from consideration as a result of a restriction requirement, 10/22/2009 hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Art Unit: 1786

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, the restriction requirement as set forth in the Office action mailed on10/22/2009 is hereby withdrawn. In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

## Claims 1,3-4 and 9-22 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
